

Aquifer Recharge Areas

Not much is known about aquifer recharge areas in Mountlake Terrace because the City does not obtain its potable water from any aquifer within the City's boundaries.

However, the City's practices and regulations provide aquifer protection. Examples include: dependence on a water district rather than individual wells for water supply; stormwater management; and regulations that buffer wetlands from development impacts.

Underground Petrol Tanks

Underground storage tanks for oil and gasoline are scattered in several locations of the City (see Figure EN-3). Leakage from these tanks can cause contamination of the soil or water resources. Clean-up of these sites is to be done under strict supervision.
